## Stainless Steel Wire Cloth

This heavy-duty, corrosion-resistant woven material has many uses. The stainless steel wire cloth is excellent for protecting radiators, oil coolers, air intakes, lights, and the passenger compartment from debris such as stones, bolts or other road hazards. For larger panels or panels of any size that are in especially vulnerable positions, use the coarsest mesh. If you need to protect from larger, heavy objects as well as smaller, lightweight objects, you may want to combine more than one mesh in a sandwich. Fabricate it into just about any shape using standard sheet metal techniques. To make a rigid, self-supporting screen, the edge of the panel can be riveted into a sheet metal frame using a backup strip.
